

STORY W09. ADD PERSON DESKTOP

As a user

I want to be able to add a person without starting the web application so that I quickly add a somebody.

EXAMPLE:

TECHNICAL DETAILS:

- When the application is started, the details of the new person are asked. The person is then added to the database.
- After adding the new person to the database, the overview is shown (including the new person).
- The user interface can be very simple. You can:
 - o add the code to the *main()* method of previous story,
 - o use *JOptionPane.showInputDialog()* for the input

ACCEPTANCE CRITERIA:

- When starting the application, the first name, last name, and other details of the new person is asked.
- After the person is added, the overview is shown.
- The newly added person appears in the overview.
